NOTE.—Where more than one kind of work is carried on in one establishment it has frequently been found impossible to distinguish the number of hands, power, and value of plant engaged in the various industries; in such cases the total has been credited to the principal industry.

* Woolwashing: Works in connection with stations not included. † Biscuits: A few of these establishments also make bread. ‡ Flour: All mills included. § Boots and Shoes: Factories with less than six hands not included. ‖ Clothing: Factories with less than ten hands not included. ¶ Shirts: Should be read with Clothing Factories, wherein the industry is now mostly carried on. ** Agricultural implement manufactories are not included under any of these heads. †† Iron and Brass Foundries, and Machinery and Engineering should be taken together, for though efforts have been made each year to distribute them into their separate divisions, such distribution has been only partially successful. ‡‡ Accurate information not available prior to 1886. §§ Saddlery: Larger repairing shops included in 1887-8, but all shops included prior to 1886. ||| Tobacco, Cigars, &c. The total number of establishments making Tobacco, Cigars, &c., during 1888, was 23. (See Table 23.)

[a] This includes the amount of the postage contributions of the United Kingdom and the Australian Colonies to the cost of Ocean Mail Subsidy. [b] Of this amount the sum of £13,995 18s. 1d. was received on account of postage due to the Colony by the United Kingdom for the years 1875 and 1876. [c] This number embraces all letters posted in the Colony for delivery within the Colony, and includes those letters hitherto classified as Town Letters. [d] The total collections for this year amounted to £24,000 more; this sum was transferred to Stamp Duties as approximate value for Postage Stamps used for Duty Stamps purposes during the year. [e] This does not include outstanding liabilities, but is the total amount expended during the year, irrespective of date of claims. [f] During the year 1885 the practice of weighing instead of counting the correspondence posted was introduced, as the limited time at the disposal of the sorting staff prevented the counting from being very carefully done, and it was thought that by weighing and allowing a certain number of letters, &c., to the lb., greater accuracy would be insured. The returns for 1885 and subsequent years may therefore be considered more reliable than those for previous years. * These figures are supplied by the newspaper proprietors, and it is believed that the numbers given for 1886 and 1887 are somewhat in excess of the truth.

Note.—The Public Examinations are similar to the *Middle Class* Examinations of Oxford and Cambridge. They are held annually, in November, and are intended to test the qualifications of boys and girls attending schools or being instructed privately. They are divided into Senior and Junior, and certificates of competency in the *several* subjects of examination are given to the successful candidates. These examinations are *distinct* from the examination for the Civil Service.

*NOTE.—The returns from which Tables 26 and 27 are compiled were obtained from clergymen and other church authorities. The figures for 1887 and 1888 denote the average number of persons attending Divine Service on Sundays, those for 1886 denote the number usually attending principal service; for some denominations these figures are identical, but for most churches the former number considerably exceeded the attendance at the principal service, and for this reason the figures for 1886 cannot be used for purposes of comparison with those of the other years given in Table 27.
